[1. A5: Integrated System Research Project \(ISRP\)](#)

Release Date: 07-18-2011Open Date: 07-18-2011Due Date: 09-08-2011Close Date: 09-08-2011

The Integrated Systems Research Program (ISRP), a new program effort that began in FY10, will conduct research at an integrated system-level on promising concepts and technologies and explore, assess or demonstrate their benefits in a relevant environment. The integrated system-level research in this program will be coordinated with on-going long-term, foundational research within the three other research programs, as well as efforts within other Federal Government agencies.

SBIR National Aeronautics and Space Administration

[2. A5.01: UAS Integration in the NAS](#)

Release Date: 07-18-2011Open Date: 07-18-2011Due Date: 09-08-2011Close Date: 09-08-2011

The following subtopic is in support of the Unmanned Aircraft Systems (UAS) Integration in the National Airspace System (NAS) Project under ISRP. There is an increasing need to fly UAS in the NAS to perform missions of vital importance to National Security and Defense, Emergency Management, Science, and to enable Commercial Applications. UAS are unable to routinely access the NAS today due to a lack of:

SBIR National Aeronautics and Space Administration

3. [01: Space Communications](#)

Release Date: 07-18-2011Open Date: 07-18-2011Due Date: 09-08-2011Close Date: 09-08-2011

NASA's communications capability is based on the premise that communications shall enable and not constrain missions. Communications must be robust to support the numerous missions for space science, Earth science and exploration of the universe.

SBIR National Aeronautics and Space Administration

4. [01.01: Antenna Technology](#)

Release Date: 07-18-2011Open Date: 07-18-2011Due Date: 09-08-2011Close Date: 09-08-2011

NASA seeks advanced antenna systems and technologies to enable communications for future space operations, space science, Earth science and solar system exploration missions. These areas, in priority order, are: Novel Materials for Next Generation Antennas

SBIR National Aeronautics and Space Administration

5. [01.02: Reconfigurable/Reprogrammable Communication Systems](#)

Release Date: 07-18-2011Open Date: 07-18-2011Due Date: 09-08-2011Close Date: 09-08-2011

NASA seeks novel approaches in reconfigurable, reprogrammable communication systems to enable the vision of space, exploration, science, and aeronautical flight systems. Advancements are required in communication systems to manage the demands of the harsh space environment on space electronics, maintain flexibility and adaptability to changing needs and requirements, and provide flexibility and survivability due to increased mission durations.

SBIR National Aeronautics and Space Administration

6. [01.03: Game Changing Technologies](#)

Release Date: 07-18-2011Open Date: 07-18-2011Due Date: 09-08-2011Close Date: 09-08-2011

NASA seeks revolutionary, highly innovative, game changing communications technologies that have the potential to enable order of magnitude performance improvements for space operations, exploration systems, and/or science mission applications. Research is geared towards far-term research focused in (but not limited to) the following areas:

SBIR National Aeronautics and Space Administration

7. [01.04: Long Range Optical Telecommunications](#)

Release Date: 07-18-2011Open Date: 07-18-2011Due Date: 09-08-2011Close Date: 09-08-2011

This subtopic seeks innovative technologies for long range Optical Telecommunications supporting the needs of space missions. Proposals are sought in the following areas: Systems and technologies relating to acquisition, tracking and sub-micro-radian pointing of the optical communications beam under typical deep-space ranges (to 40 AU) and spacecraft micro-vibration environments. Within these domains of interest, desired proposal focus areas to develop and/or demonstrate technologies are as follows: Isolation Platforms

SBIR National Aeronautics and Space Administration

8. [01.05: Long Range Space RF Telecommunications](#)

Release Date: 07-18-2011 Open Date: 07-18-2011 Due Date: 09-08-2011 Close Date: 09-08-2011

This subtopic seeks to develop innovative long-range RF telecommunications technologies supporting the needs of space missions. Purpose (based on NASA needs) and current state-of-the-art

SBIR National Aeronautics and Space Administration

9. [01.06: CoNNeCT Experiments](#)

Release Date: 07-18-2011 Open Date: 07-18-2011 Due Date: 09-08-2011 Close Date: 09-08-2011

NASA has developed an on-orbit, reprogrammable, software defined radio-based (SDR) testbed facility aboard the International Space Station (ISS), to conduct a suite of experiments to advance technologies, reduce risk, and enable future mission capabilities.

SBIR National Aeronautics and Space Administration

10. [02: Space Transportation](#)

Release Date: 07-18-2011 Open Date: 07-18-2011 Due Date: 09-08-2011 Close Date: 09-08-2011

Achieving space flight remains a challenging enterprise. It is an undertaking of great complexity, requiring numerous technological and engineering disciplines and a high level of organizational skill. Overcoming Earth's gravity to achieve orbit demands collections of quality data to maintain the security required of the range. The harsh environment of space puts tight constraints on the equipment needed to perform the necessary functions. Not only is there a concern for safety but the 2004 Space Transportation Policy directive states that the U.S.
